EDUCATION

George Washington University, Washington DC, United States — Expected: May 2027
M.S. in Computer Science — **GPA: 3.83/4.0**
Relevant Coursework: Machine Learning, Trustworthy AI, Gen AI for Business

Wilmington University, DE, United States — Completed: May 2025
B.S. in Computer Science (AI Concentration) | Undergraduate Technology Award — **GPA: 4.0/4.0**

EXPERIENCE

George Washington University - GW IT — July 2026 - Present
AI Solutions Specialist — *Washington DC, United States*

- Deployed LLM-powered AI agents using prompt engineering, RAG, and **agent orchestration** for 10+ workflows, eliminating **20+ hours** of manual work per week across student services, financial and administrative operations.
- Built LLM-based document extraction and **metadata workflows** for university contracts, converting unstructured text into **structured data** and interactive dashboards with customizable filters for instant stakeholder analysis.
- Evaluated models, prompts, knowledge sources, and agent workflows across Copilot Studio, Gemini, Box AI, and NebulaOne to improve information extraction, response accuracy, and task performance.
- Partnered with faculty and staff across 4+ university teams to identify automation opportunities, design AI-driven workflows, and deliver technical demonstrations tailored to stakeholder needs.

Fintellix - G2 Risk Solutions — June 2024 - December 2024
AI Engineer Intern — *Bengaluru, India*

- Developed an AI-driven regulatory mapping system in **Python** using embedding-based feature representations and similarity search to automatically map client data fields to regulatory fields, achieving **97% accuracy**.
- Implemented automated validation and human-in-the-loop review for low-confidence predictions, reducing manual compliance preparation time by 40 hours per month.
- Designed a responsive multi-page React interface and integrated AI-generated mapping recommendations with a **Django** backend, reducing workflow completion time by 30%.

EnerMAN Technologies — June 2023 - July 2023
Software Development Intern — *Bengaluru, India*

- Engineered an end-to-end OPC UA client in **Python** (python-opcua) for real-time acquisition of Solar PV plant data, supporting an AI/ML-enabled SCADA monitoring system.
- Designed **parsers** for complex, **multi-format data streams**, improving processing efficiency by **40%** and reducing integration errors by **25%** through validation against internal and simulated servers.

SKILLS

Languages	Python, SQL, Java, JavaScript, Kotlin
AI/ML	NumPy, PyTorch, TensorFlow, LLMs, AI Agents, RAG, LangChain
Frameworks & Tools	Kafka, PostgreSQL, Docker, AWS, Spring Boot, FastAPI, Django, REST APIs, pytest

PROJECTS

Micro Marketplace — Java, Spring Boot, Kafka, Keycloak, MySQL, MongoDB

- Built a microservice e-commerce platform with Product, Order, Inventory, Notification, API Gateway, and Eureka services; validated stock synchronously before accepting orders and used **Kafka** for **asynchronous messaging**.
- Added **fault tolerance** with Resilience4j, JWT auth via Keycloak, and **observability** with Prometheus, Grafana, and Zipkin, running on **16 Docker containers**.

Flight Fare Prediction & Analytics — Python, FastAPI, React, SQLite, NumPy, pytest

- Built a flight fare search application using React and **Python/FastAPI**, leveraging **30M+** U.S. Department of Transportation ticket records across **400+ airports** to provide data-driven fare estimates.
- Evaluated a fare-range estimator on **7.9M unseen ticket records**, achieving **$97 average estimation error** with **81%** of fares within predicted ranges; implemented confidence checks to prevent unreliable estimates.
