EDUCATION

George Washington University, Washington DC, United States M.S. in Computer Science Relevant Coursework: Machine Learning, Trustworthy AI, Gen AI for Business	Expected: May 2027 GPA: 3.9/4.0
Wilmington University, DE, United States B.S. in Computer Science (AI Concentration) Undergraduate Technology Award	Completed: May 2025 GPA: 4.0/4.0

EXPERIENCE

George Washington University - GW IT Student AI Solutions Specialist	July 2026 - Present LLMs, AI Agents, Prompt Engineering, RAG, Agent Orchestration
- Designed and deployed LLM-powered AI agents for 10+ university workflows, automating repetitive processes and eliminating 20+ hours of manual work per week across student services, financial and administrative operations. - Built document extraction and metadata workflows for university contracts, transforming unstructured information into structured data and interactive dashboards with customizable filters for instant stakeholder analysis. - Evaluated models, prompts, knowledge sources, and agent workflows across Copilot Studio, Gemini, Box AI, and GW Chat to improve information extraction, response accuracy, and task performance. - Partnered with faculty and staff across 4+ university teams to identify automation opportunities, design AI-driven workflows, and deliver technical demonstrations tailored to stakeholder needs.	
Fintellix - G2 Risk Solutions AI Engineer Intern	June 2024 - December 2024 Python, Java, ReactJS, JavaScript, Next.js, Django, NumPy, PostgreSQL
- Developed an AI-driven regulatory mapping system using embedding-based feature representations and similarity search to automatically map client data fields to regulatory fields, achieving 97% accuracy. - Implemented automated validation and human-in-the-loop review processes for low-confidence predictions, reducing manual compliance preparation time by 30 hours per month. - Designed a responsive multi-page React interface and integrated AI-generated mapping recommendations with a Django backend, reducing workflow completion time by 3 minutes.	
EnerMAN Technologies Software Development Intern	June 2023 - July 2023 Python, python-opcua, Bash, GitHub, Visual Studio Code
- Engineered an end-to-end OPC UA client in Python for real-time acquisition of Solar PV plant data, supporting an AI/ML-enabled SCADA monitoring system. - Designed parsers for complex, multi-format data streams, improving processing efficiency by 40% and reducing integration errors by 25% through validation against internal and simulated servers.	

SKILLS

Languages	Python, Java, Kotlin, SQL, JavaScript
AI/ML	LLMs, AI Agents, Prompt Engineering, RAG, LangChain, PyTorch, TensorFlow, NumPy
Frameworks & Tools	React, Next.js, Django, AWS, ChromaDB, PostgreSQL, REST APIs, Git

PROJECTS

Multi-Objective Carbon-Aware Logistics Routing	Python, PyTorch, PPO, DQN, OSMnx
- Built a multi-objective reinforcement learning system using PPO, Double DQN, and Weighted A* to optimize freight routing while balancing travel time and CO₂ emissions. - Integrated real-world transportation, elevation, and emissions datasets to train and evaluate routing agents, reducing estimated emissions by 20% while adding only 5-10 minutes to ETA.	
Research Paper Q&A Assistant	FastAPI, React, Gemini, LangChain, ChromaDB
- Built a RAG-based question-answering system for research papers using Gemini, embeddings, and vector search to support conversational querying across multiple documents. - Engineered an end-to-end pipeline for PDF ingestion, semantic chunking, metadata-aware retrieval, and citation-backed answer generation.
